HOSPITALIZATION/SURGICAL INFORMATION

Preparation—The hair around the surgical area will be clipped and the skin scrubbed with an antiseptic. We follow sterile procedures taking every precaution to prevent infection to your pet.

Anesthesia—Pre-surgical blood work and physical examination will enable us to assess and minimize the risk of anesthesia for your pet. The anesthesia used will be either injectable form, inhalant form, or a combination of both.

Monitoring—We further minimize anesthetic risk by monitoring heart rate, respiration rate and quality, oxygenation, and depth of anesthesia during the procedure.

Pain Management—Animals perceive pain in a similar way to humans, through the nervous system. We will proactively manage pain associated with any procedure with appropriate pain management medications. This medication will not remain effective once home. Our doctors strongly advise in any surgical procedure that pain management medications be taken home.
